

## Mip 22 Practical

Access the tool from github here: <https://github.com/makdosx/mip22>

Then Do as mentioned below:

The screenshot shows the Mip22 tool interface in a terminal window. The title bar indicates the file path is /usr/bin/. The menu bar includes File, Actions, Edit, View, and Help. The main display features the title "MISSIONS IMPOSSIBLES" in large, blue, pixelated font. To the right of the title is a small ASCII art logo of a dragon. Below the title, a message states: "Mip22 tool made for educational purpose only. Version: 3.3. The author is not responsible for any malicious use of the program. Mip Created by makdosx (https://github.com/makdosx)". A list of options is displayed: [1] Attack Default, [2] Attack Manual, [3] Attack Customize, [4] Apis, [5] Email, [6] Vpn, [7] Sound (pc only), and [0] Exit. The prompt "[~] Select an option : 1" is shown, with the number 1 entered.

```
MISSIONS IMPOSSIBLES

Mip22 tool made for educational purpose only. Version: 3.3

[-] Select a port forwarding service : 3
[-] Initializing... ( http://127.0.0.1:8080 )
[-] Setting up cloned page...
[-] Starting your php server...
[-] Launching Cloudflared...

URL http : http://chapel-begins-wrapped-marketplace.trycloudflare.com
URL http(s) : https://chapel-begins-wrapped-marketplace.trycloudflare.com
URL subdomain : http://secure-login-for-instagram@chapel-begins-wrapped-marketplace.trycloudflare.com
URL shortener : Error: Sorry, the URL you entered is on our internal blacklist. It may have been used abusively in the past, or it may link to another URL redirection service.
[-] Waiting for Victim fingerprints and Login Info.. Ctrl + C to exit...
```

If the cloudflared is not showing the Link at first then exit from the tool and re run the script again. Then this will work. Then copy the link and paste it on the website after that when you enter your credential it will get displayed on the terminal of your where mip22 is running.
